Weekly **MORBIDITY REPORT**

SHORE STATIONS IN CONTINENTAL UNITED STATES

NAVMED 104

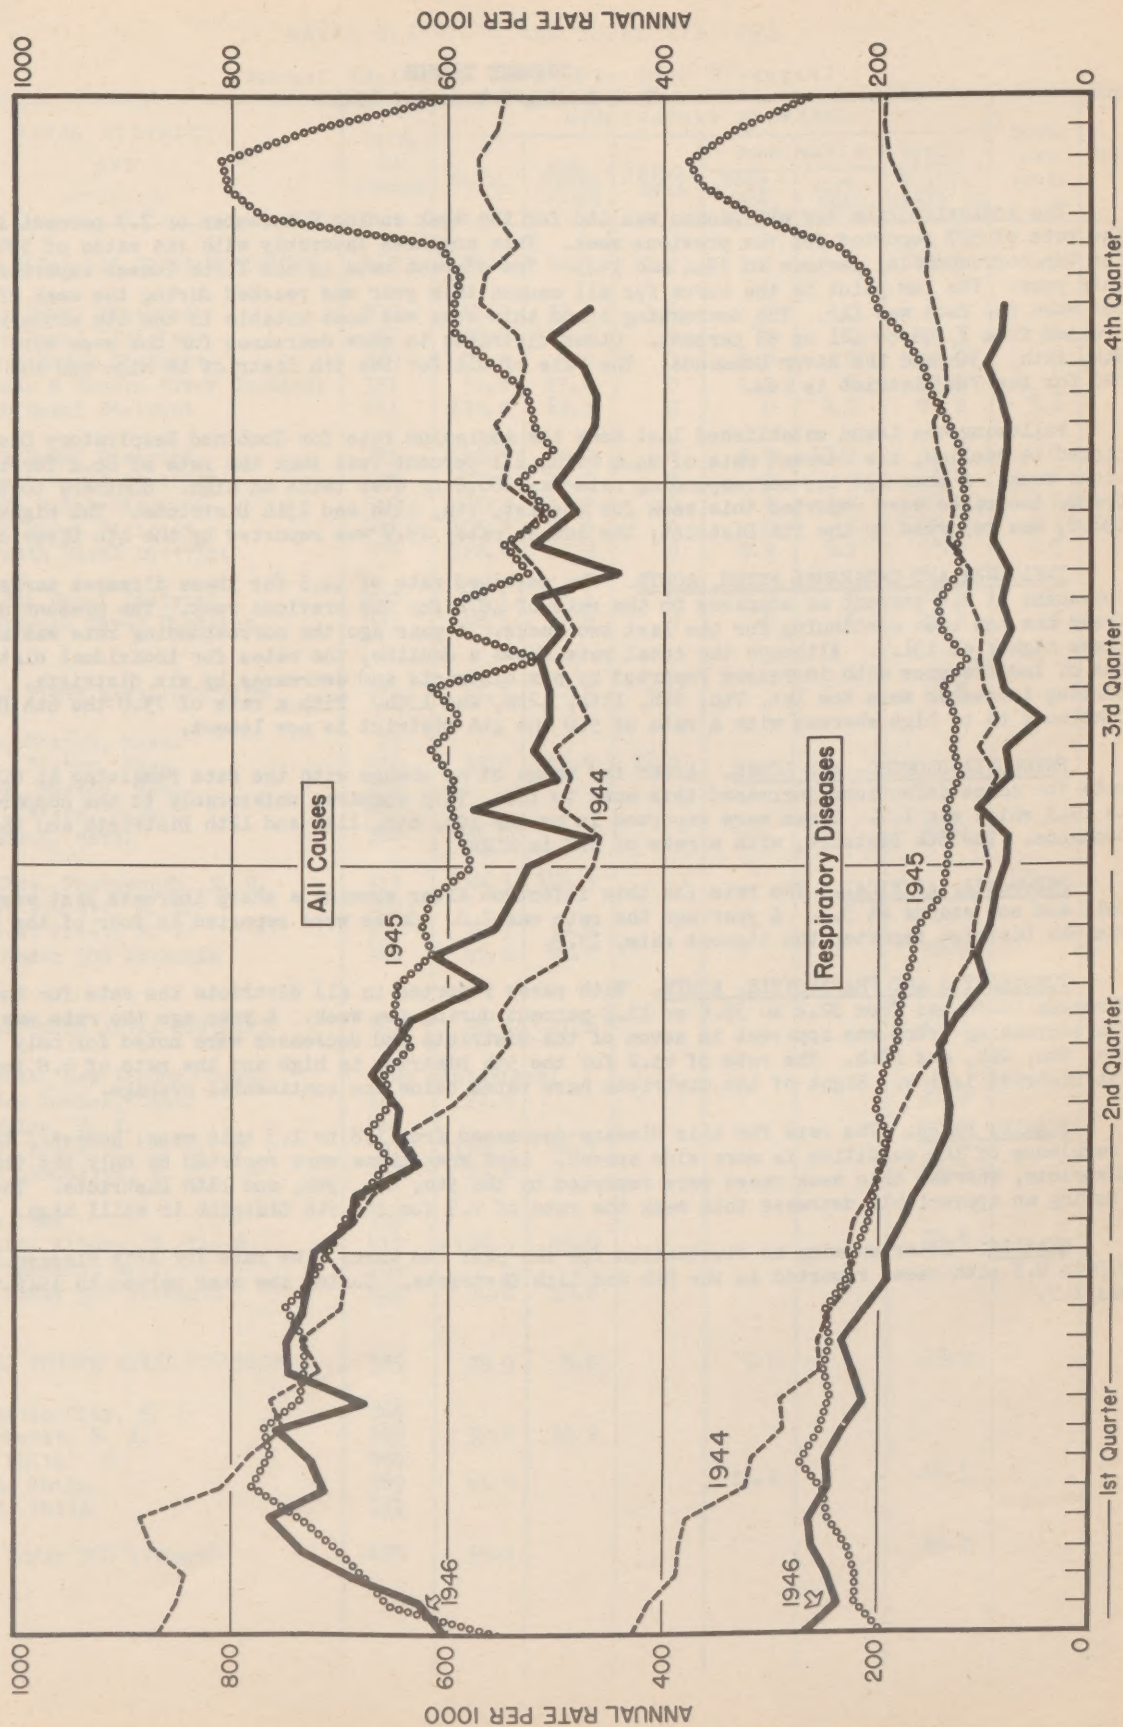

WEEK ENDING 9 November 1946

REPORT NO. 254

RESTRICTED—THE INFORMATION IN THIS REPORT IS NOT TO BE COMMUNICATED DIRECTLY OR INDIRECTLY TO THE PRESS OR TO ANYONE NOT IN THE ARMED FORCES

ADMISSION RATES—ALL CAUSES AND RESPIRATORY DISEASES

CONTINENTAL LIMITS OF THE UNITED STATES—1944, 1945, 1946

CURRENT TRENDS
Week Ending 9 November 1946

The admission rate for all causes was 468 for the week ending 9 November or 7.7 percent lower than the rate of 507 reported for the previous week. This compares favorably with the rates of 539 and 597 for the corresponding periods in 1944 and 1945. The current rate is the fifth lowest reported so far this year. The low point in the curve for all causes this year was reached during the week of 7 September when the rate was 446. The decreasing trend this week was most notable in the 6th whose rate decreased from 1,148 to 421 or 63 percent. Other districts to show decreases for the week were the 5th, 9th, 12th, 13th and the River Commands. The rate of 611 for the 5th District is high and the rate of 325 for the 7th District is low.

Following the trend established last week the admission rate for Combined Respiratory Diseases continued to decline, the current rate of 84.6 being 2.1 percent less than the rate of 86.4 for the previous week. A year ago the corresponding rate was 200.8 or over twice as high. Contrary to the general trend, increases were reported this week for the 1st, 7th, 11th and 13th Districts. The highest rate, 132.8, was reported by the 5th District; the lowest rate, 29.9 was reported by the 4th District.

INFLUENZA AND CATARRHAL FEVER, ACUTE. The combined rate of 44.5 for these diseases marks an improvement of 8.8 percent as compared to the rate of 48.8 for the previous week. The present decreasing trend has now been continuing for the last two weeks. A year ago the corresponding rate was almost 3 times higher at 131.7. Although the total rate shows a decline, the rates for individual districts is one of indifference with increases reported by six districts and decreases by six districts. Those reporting increases were the 1st, 7th, 8th, 11th, 12th, and 13th. With a rate of 75.0 the 6th District continues to be high whereas with a rate of 5.0 the 4th District is now lowest.

PNEUMONIA-BRONCHO- AND LOBAR. After two weeks of no change with the rate remaining at 0.8 the rate for these infections increased this week to 1.2. This compares unfavorably to the comparable rate in 1945 which was 1.7. Cases were reported in by the 4th, 6th, 11th and 12th Districts and the River Commands. The 6th District, with a rate of 5.8 is high.

PNEUMONIA, ATYPICAL. The rate for this infection after showing a sharp increase last week, again fell and now stands at 3.2. A year ago the rate was 2.0. Cases were reported in four of the districts. The 6th District reported the highest rate, 17.3.

TONSILLITIS AND PHARYNGITIS, ACUTE. With cases reported in all districts the rate for these diseases increased from 32.2 to 35.8 or 11.2 percent during the week. A year ago the rate was 65.5. The increasing trend was apparent in seven of the districts and decreases were noted for only the 3rd, 6th, 8th, 9th, and 12th. The rate of 65.2 for the 5th District is high and the rate of 6.8 for the 1st District is low. Eight of the districts have rates below the continental average.

SCARLET FEVER. The rate for this disease decreased from 1.8 to 1.3 this week; however, the prevalence of the condition is more wide spread. Last week cases were reported by only the 5th and 9th Districts, whereas this week cases were reported by the 5th, 8th, 9th, and 11th Districts. Though showing an appreciable decrease this week the rate of 7.9 for the 9th District is still high.

MEASLES. After showing no fluctuation for the past two weeks, the rate for this disease rose from 0.3 to 0.5 with cases reported in the 8th and 11th Districts. During the same period in 1945 the rate was 1.7.
